Systems Operator with experience supporting IT systems in a high-volume distribution center environment. Skilled in troubleshooting system issues, analyzing logs and reports, coordinating technical resolutions, and improving operational processes. Experienced in development using multiple programming languages, hardware and software support, and cross-functional problem-solving. Combines hands-on technical knowledge with an understanding of how system reliability affects daily operations.

WORK HISTORY

WALMART DISTRIBUTION CENTER 6036 | PALESTINE, TX

10/2021 – PRESENT

SYSTEMS OPERATOR

- Monitored system and application availability and performance to support efficient operations
- Investigated system stoppages, diagnosed technical issues, and coordinated corrective actions to minimize operational disruption.
- Analyzed job logs and application errors to identify issues, determine corrective actions, and support timely resolution.
- Diagnosed and resolved hardware and software issues to restore system functionality and support daily operations.
- Utilized various programming languages to develop software solutions
- Worked across departments to investigate technical issues, coordinate solutions, and reduce disruptions to operations.
- Provided technical support to end users, resolving hardware, software, and system access issues.
